

COMPLETE GREYWATER SOLUTION

GREASE TRAP

A grease trap is designed to **capture and remove fats, oils, and grease (FOG)** from the kitchen wastewater before it enters the greywater diverter to prevent blockages and odours.

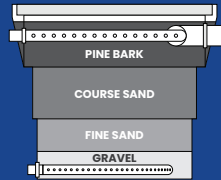

GREYWATER FILTER

DIVERSION

A diverter provides **basic filtration of debris and particulates** from greywater and pumps it out for further treatment or immediate use.

TREATMENT

A biological treatment system filters greywater using natural processes, providing **higher quality treated water** for various non-potable applications.

DRIP IRRIGATION KIT

A drip irrigation kit allows you to efficiently **distribute greywater** to plants and gardens.

A greywater system helps conserve water and reduce the environmental impact of wastewater disposal. **Adhering to local regulations and safety standards is crucial for their effective operation.**
